---

**COMPUTER SCIENCE****0478/12**

Paper 1 Computer Systems

**February/March 2024**

MARK SCHEME

Maximum Mark: 75

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the February/March 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

---

This document consists of **13** printed pages.

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

#### GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

#### GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

#### GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

#### GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**Mark scheme abbreviations**

/ separates alternative words / phrases within a marking point

// separates alternative answers within a marking point

underline actual word given must be used by candidate (grammatical variants accepted)

**max** indicates the maximum number of marks that can be awarded

( ) the word / phrase in brackets is not required, but sets the context

**Note:** No marks are awarded for using brand names of software packages or hardware.

Question	Answer	Marks
1(a)	B	1
1(b)(i)	A	1
1(b)(ii)	01001110	1
1(b)(iii)	<ul style="list-style-type: none"> <li>• <b>Unique</b> binary/denary number given/stored for each character</li> <li>• The code for R is stored, then the code for E then D <b>in sequence</b></li> </ul>	2
1(c)(i)	Any <b>two</b> from: <ul style="list-style-type: none"> <li>• More bits allocated to each amplitude</li> <li>• <b>Amplitudes</b> can be more precise</li> <li>• A wider range of <b>amplitudes</b> can be recorded</li> </ul>	2
1(c)(ii)	Increase the sample rate	1

Question	Answer	Marks
2(a)	<p><b>One</b> mark for letter and <b>One</b> mark for matching correction.</p> <ul style="list-style-type: none"> <li>• Statement B ...</li> <li>• ...MAR stores addresses and not instructions</li>   <li>• Statement C ...</li> <li>• ...Data is from bus not PC // Data is from address in MAR not PC</li> </ul>	4
2(b)(i)	It can run 3.5 billion FE cycles <b>each second</b> // it can execute 3.5 billion instructions <b>each second</b>	1
2(b)(ii)	<p>Any <b>two</b> from:</p> <ul style="list-style-type: none"> <li>• <b>More cores</b> increases/improves the performance</li> <li>• <b>More cores</b> mean more FDE cycles/instructions are executed each second</li> <li>• ...because each core runs an FE cycle/instruction <b>simultaneously</b></li> </ul>	2
2(b)(iii)	<p>Any <b>two</b> from:</p> <ul style="list-style-type: none"> <li>• <b>More cache</b> improves performance</li> <li>• ...because <b>more cache</b> means the processor can access <b>more</b> frequently used data/instructions faster</li> <li>• ...instead of having to access the data from the <b>slower-access RAM</b></li> </ul>	2
2(c)(i)	<p>Any <b>two</b> from:</p> <ul style="list-style-type: none"> <li>• Volatile storage</li> <li>• Stores data for the processor to access directly/quickly // directly accessed by the CPU</li> <li>• Stores currently running data/instructions</li> </ul>	2
2(c)(ii)	<p>Any <b>one</b> from: e.g.</p> <ul style="list-style-type: none"> <li>• BIOS // bootstrap/loader</li> <li>• Firmware</li> <li>• Parts of OS</li> </ul>	1
2(c)(iii)	<p>Any <b>one</b> from: e.g.</p> <ul style="list-style-type: none"> <li>• To run programs when there is insufficient RAM to run them</li> <li>• To allow RAM to store more data when required</li> </ul>	1

Question	Answer		Marks								
3(a)	<p><b>One mark each:</b></p> <table border="1" data-bbox="332 277 1544 754"> <thead> <tr> <th data-bbox="332 277 669 341">Function name</th><th data-bbox="669 277 1544 341">Description</th></tr> </thead> <tbody> <tr> <td data-bbox="332 341 669 484">managing memory</td><td data-bbox="669 341 1544 484">           Examples:            • allocates memory to processes            • prevents two processes accessing the same memory         </td></tr> <tr> <td data-bbox="332 484 669 563">platform for running applications</td><td data-bbox="669 484 1544 563">allows application software to run on the computer</td></tr> <tr> <td data-bbox="332 563 669 754">managing peripherals</td><td data-bbox="669 563 1544 754">           Examples:            • allocates data to buffers            • transmits data to hardware            • receives data from hardware         </td></tr> </tbody> </table>	Function name	Description	managing memory	Examples: • allocates memory to processes • prevents two processes accessing the same memory	platform for running applications	allows application software to run on the computer	managing peripherals	Examples: • allocates data to buffers • transmits data to hardware • receives data from hardware	<b>3</b>	
Function name	Description										
managing memory	Examples: • allocates memory to processes • prevents two processes accessing the same memory										
platform for running applications	allows application software to run on the computer										
managing peripherals	Examples: • allocates data to buffers • transmits data to hardware • receives data from hardware										
3(b)(i)	To indicate that something requires the attention of the <b>processor/OS/CPU</b>		<b>1</b>								
3(b)(ii)	<p><b>One mark for input device <b>and</b> matching interrupt:</b>            e.g.</p> <ul style="list-style-type: none"> <li>• Keyboard Key pressed</li> <li>• Mouse Mouse moved//button clicked</li> </ul>		<b>1</b>								

Question	Answer	Marks
3(b)(iii)	<p>Any <b>five</b> from:</p> <ul style="list-style-type: none"> <li>• Interrupt is given priority</li> <li>• ...and placed in interrupt queue</li> <li>• Processor finishes current <b>FE cycle</b> for program</li> <li>• Processor checks interrupt priority queue // processor checks for higher priority interrupt than program/process</li> <li>• If lower priority processor runs next FDE cycle for program/process // if lower priority processor continues with program/process</li> <li>• (if higher priority) processor <b>stores</b> current process/registers on stack</li> <li>• Checks source of interrupt</li> <li>• ... and calls the appropriate ISR</li> <li>• ISR handles/resolves interrupt</li> <li>• If there is another higher priority interrupt (than process) then repeat</li> <li>• ... (otherwise) processor retrieves content of stack/registers/previous process (to continue with process from program)</li> </ul>	5

Question	Answer	Marks						
4	<p>Any <b>five</b> marks for each part of diagram:</p> <ul style="list-style-type: none"> <li>• <b>URL</b> from computer/browser to DNS</li> <li>• DNS storing table/database of <b>URL</b> and <b>IPs</b> // DNS finding <b>IP</b> for <b>URL</b></li> <li>• DNS sending <b>IP</b> to computer / browser</li> <li>• DNS sending to higher DNS if not found</li> <li>• Web browser/computer sending request to <b>IP</b> of <b>web server</b></li> <li>• <b>Web server</b> processing request</li> <li>• Web page data sent from <b>server</b> to computer / web browser</li> </ul> <pre> graph LR     A[Student's computer] -- "1. URL" --&gt; B[DNS]     B -- "3. IP" --&gt; C[Web server]     C -- "4. request to IP" --&gt; D[6. HTML web page]     D -- "5. Process request" --&gt; E[Student's computer]     B -- "2. Find IP for URL" --&gt; C   </pre> <p>The diagram illustrates the process of retrieving a web page. It starts with a 'Student's computer' sending a 'URL' to a 'DNS' server (step 1). The 'DNS' server returns an 'IP' address (step 3). The 'Student's computer' then sends a 'request to IP' to a 'Web server' (step 4). The 'Web server' processes the request and returns an 'HTML web page' (step 5). Finally, the 'HTML web page' is sent back to the 'Student's computer' (step 6).</p> <p>Detailed description of the DNS table:</p> <table border="1"> <thead> <tr> <th>URLs</th> <th>IP</th> </tr> </thead> <tbody> <tr> <td>.....co.uk</td> <td>250.256..</td> </tr> <tr> <td>.....co.uk</td> <td>058.51..</td> </tr> </tbody> </table> <p>2. Find IP for URL</p>	URLs	IP	.....co.uk	250.256..	.....co.uk	058.51..	5
URLs	IP							
.....co.uk	250.256..							
.....co.uk	058.51..							

Question	Answer	Marks
5	<p><b>One</b> mark for each term in correct place:</p> <ul style="list-style-type: none"> <li>• physically</li> <li>• blockchains</li> <li>• time-stamp</li> <li>• traced</li> </ul> <p>A digital currency does not exist <b>physically</b>, it can only be accessed electronically.</p> <p>Some digital currencies have digital ledgers called a <b>blockchains</b>. These are decentralised databases where each transaction is stored as a new set of data with a <b>time-stamp</b> and is linked to the previous set of data. This means that transactions cannot be altered, only new transactions added, which allows the location of the data to be <b>traced</b>.</p>	4

Question	Answer	Marks
6(a)	<p>Any <b>one</b> from:</p> <ul style="list-style-type: none"> <li>• It has <b>electrical</b> components // by example</li> <li>• It is programmable</li> </ul>	1
6(b)(i)	<p>Any <b>five</b> from:</p> <ul style="list-style-type: none"> <li>• Sensor <b>continuously</b> sends the <b>digitised</b> value / reading / distance to the microprocessor</li> <li>• Microprocessor compares the data / signal to the stored data of a person and distance of 3m</li> <li>• If the data / signal is less than (or equal to) a person and within 3m</li> <li>• ...a <b>signal</b> is sent to <b>actuator</b> to make the tractor <b>stop</b> / apply the brakes</li> <li>• If the data/signal is greater than 3m no action is taken</li> <li>• If stopped and data/signal is not a person and/or more than 3m a <b>signal</b> is sent to <b>actuator</b> to make the tractor <b>start</b></li> <li>• The whole process repeats until turned off</li> </ul>	5

Question	Answer	Marks
6(b)(ii)	<p><b>One</b> mark for sensor and <b>One</b> mark for matching use:  e.g.</p> <ul style="list-style-type: none"> <li>• Accelerometer ...</li> <li>• ...to adjust for uneven ground // to detect if the tractor crashes</li> <li>• Proximity ...</li> <li>• ...to detect if near the end of the field // to detect other obstacles</li> <li>• Light ...</li> <li>• ... to identify when to turn the headlights on</li> </ul>	2
6(c)	<p><b>Any three</b> from:  e.g.</p> <ul style="list-style-type: none"> <li>• Set-up cost may be high</li> <li>• Maintenance cost may be high</li> <li>• ... needs skilled workers/expert to fix</li> <li>• Farmer may need reskilling in how to use it ...</li> <li>• ... which could be costly</li> <li>• Leads to deskilling of farmers/workers</li> <li>• Farmer may need fewer employees</li> <li>• ... leading to unemployment</li> <li>• Can malfunction</li> <li>• ... and not recognise a person and fails to stop</li> <li>• Changing function can be expensive</li> </ul>	3
6(d)	<p><b>Any three</b> from</p> <ul style="list-style-type: none"> <li>• Knowledge base</li> <li>• Rule base</li> <li>• Inference engine</li> <li>• Interface</li> </ul>	3

Question	Answer	Marks																																																																								
6(e)(i)	<p>Any <b>three</b> from:</p> <ul style="list-style-type: none"> <li>• The same data is transmitted back (from computer to tractor)</li> <li>• Tractor compares both sets of data</li> <li>• ... if they are identical there is no error // reverse</li> <li>• <b>Tractor</b> sends confirmation of accuracy if the same // <b>Tractor</b> resends the data if they are different // <b>Tractor</b> transmits error if they are different</li> </ul>	3																																																																								
6(e)(ii)	<p><b>One</b> mark for two correct  <b>Two</b> marks for five correct  <b>Three</b> marks for all eight correct</p> <table border="1" data-bbox="323 589 1477 1235"> <thead> <tr> <th data-bbox="323 589 489 695">parity bit</th><th data-bbox="489 589 635 695">bit 7</th><th data-bbox="635 589 781 695">bit 6</th><th data-bbox="781 589 927 695">bit 5</th><th data-bbox="927 589 1073 695">bit 4</th><th data-bbox="1073 589 1219 695">bit 3</th><th data-bbox="1219 589 1364 695">bit 2</th><th data-bbox="1364 589 1477 695">bit 1</th></tr> </thead> <tbody> <tr> <td data-bbox="323 695 489 759"><b>byte 1</b></td><td data-bbox="489 695 635 759">1</td><td data-bbox="635 695 781 759">1</td><td data-bbox="781 695 927 759">0</td><td data-bbox="927 695 1073 759">0</td><td data-bbox="1073 695 1219 759">1</td><td data-bbox="1219 695 1364 759">1</td><td data-bbox="1364 695 1477 759">0</td></tr> <tr> <td data-bbox="323 759 489 822"><b>byte 2</b></td><td data-bbox="489 759 635 822">1</td><td data-bbox="635 759 781 822">0</td><td data-bbox="781 759 927 822">0</td><td data-bbox="927 759 1073 822">0</td><td data-bbox="1073 759 1219 822">0</td><td data-bbox="1219 759 1364 822">1</td><td data-bbox="1364 759 1477 822">1</td></tr> <tr> <td data-bbox="323 822 489 886"><b>byte 3</b></td><td data-bbox="489 822 635 886">0</td><td data-bbox="635 822 781 886">1</td><td data-bbox="781 822 927 886">0</td><td data-bbox="927 822 1073 886">0</td><td data-bbox="1073 822 1219 886">0</td><td data-bbox="1219 822 1364 886">0</td><td data-bbox="1364 822 1477 886">0</td></tr> <tr> <td data-bbox="323 886 489 949"><b>byte 4</b></td><td data-bbox="489 886 635 949">0</td><td data-bbox="635 886 781 949">1</td><td data-bbox="781 886 927 949">0</td><td data-bbox="927 886 1073 949">0</td><td data-bbox="1073 886 1219 949">1</td><td data-bbox="1219 886 1364 949">1</td><td data-bbox="1364 886 1477 949">1</td></tr> <tr> <td data-bbox="323 949 489 1013"><b>byte 5</b></td><td data-bbox="489 949 635 1013">1</td><td data-bbox="635 949 781 1013">0</td><td data-bbox="781 949 927 1013">0</td><td data-bbox="927 949 1073 1013">0</td><td data-bbox="1073 949 1219 1013">0</td><td data-bbox="1219 949 1364 1013">0</td><td data-bbox="1364 949 1477 1013">0</td></tr> <tr> <td data-bbox="323 1013 489 1076"><b>byte 6</b></td><td data-bbox="489 1013 635 1076">0</td><td data-bbox="635 1013 781 1076">1</td><td data-bbox="781 1013 927 1076">1</td><td data-bbox="927 1013 1073 1076">1</td><td data-bbox="1073 1013 1219 1076">1</td><td data-bbox="1219 1013 1364 1076">1</td><td data-bbox="1364 1013 1477 1076">1</td></tr> <tr> <td data-bbox="323 1076 489 1140"><b>byte 7</b></td><td data-bbox="489 1076 635 1140">1</td><td data-bbox="635 1076 781 1140">1</td><td data-bbox="781 1076 927 1140">0</td><td data-bbox="927 1076 1073 1140">0</td><td data-bbox="1073 1076 1219 1140">1</td><td data-bbox="1219 1076 1364 1140">1</td><td data-bbox="1364 1076 1477 1140">0</td></tr> <tr> <td data-bbox="323 1140 489 1235"><b>parity byte</b></td><td data-bbox="489 1140 635 1235">1</td><td data-bbox="635 1140 781 1235">0</td><td data-bbox="781 1140 927 1235">0</td><td data-bbox="927 1140 1073 1235">0</td><td data-bbox="1073 1140 1219 1235">1</td><td data-bbox="1219 1140 1364 1235">0</td><td data-bbox="1364 1140 1477 1235">1</td></tr> </tbody> </table>	parity bit	bit 7	bit 6	bit 5	bit 4	bit 3	bit 2	bit 1	<b>byte 1</b>	1	1	0	0	1	1	0	<b>byte 2</b>	1	0	0	0	0	1	1	<b>byte 3</b>	0	1	0	0	0	0	0	<b>byte 4</b>	0	1	0	0	1	1	1	<b>byte 5</b>	1	0	0	0	0	0	0	<b>byte 6</b>	0	1	1	1	1	1	1	<b>byte 7</b>	1	1	0	0	1	1	0	<b>parity byte</b>	1	0	0	0	1	0	1	3
